10. **Question:** How do you find the area of a triangle with a base of 10 and a height of 5?
11. **Answer:** The area of a triangle is given by the formula $A = \frac{1}{2}bh$, where b is the base and h is the height. In this case, $b = 10$ and $h = 5$, so the area is $A = \frac{1}{2}(10)(5) = 25$.
12. **Question:** How do you find the area of a circle with a radius of 3?
13. **Answer:** The area of a circle is given by the formula $A = \pi r^2$, where r is the radius. In this case, $r = 3$, so the area is $A = \pi(3)^2 = 9\pi$.
14. **Question:** How do you find the area of a rectangle with a length of 8 and a width of 4?
15. **Answer:** The area of a rectangle is given by the formula $A = lw$, where l is the length and w is the width. In this case, $l = 8$ and $w = 4$, so the area is $A = (8)(4) = 32$.
16. **Question:** How do you find the area of a square with a side length of 6?
17. **Answer:** The area of a square is given by the formula $A = s^2$, where s is the side length. In this case, $s = 6$, so the area is $A = (6)^2 = 36$.

1.2. Area of a Circle

How do you find the area of a circle? The formula for the area of a circle is $A = \pi r^2$, where r is the radius.

1.2.1. Example

1. **Question:** How do you find the area of a circle with a radius of 3?
2. **Answer:** The area of a circle is given by the formula $A = \pi r^2$, where r is the radius. In this case, $r = 3$, so the area is $A = \pi(3)^2 = 9\pi$.
3. **Question:** How do you find the area of a circle with a diameter of 6?
4. **Answer:** The area of a circle is given by the formula $A = \pi r^2$, where r is the radius. In this case, the diameter is 6, so the radius is 3. The area is $A = \pi(3)^2 = 9\pi$.

1.2.2. Practice

1. **Question:** How do you find the area of a circle with a radius of 4?
2. **Answer:** The area of a circle is given by the formula $A = \pi r^2$, where r is the radius. In this case, $r = 4$, so the area is $A = \pi(4)^2 = 16\pi$.
3. **Question:** How do you find the area of a circle with a diameter of 8?
4. **Answer:** The area of a circle is given by the formula $A = \pi r^2$, where r is the radius. In this case, the diameter is 8, so the radius is 4. The area is $A = \pi(4)^2 = 16\pi$.

Classification of the types of the research methods

№	Method	Characteristics	Advantages	Disadvantages
1	Qualitative	Focus on understanding the meaning and context of the data.	Provides rich, detailed information.	Subjective and difficult to generalize.
2	Quantitative	Focus on measuring and testing hypotheses.	Objective and easy to generalize.	Lacks depth and context.
3	Mixed Methods	Combines both qualitative and quantitative approaches.	Provides a more comprehensive understanding.	Complex and time-consuming.
4	Experimental	Involves manipulating variables to observe effects.	Establishes causal relationships.	Artificial and lacks ecological validity.
5	Survey	Collects data from a large number of respondents.	Efficient and easy to administer.	Self-report bias and low response rates.
6	Case Study	Intensive investigation of a single case or a small number of cases.	Provides in-depth insight into a specific case.	Lacks generalizability.
7	Interview	Direct communication with participants to gather information.	Allows for clarification and follow-up questions.	Time-consuming and subject to bias.
8	Focus Group	Group discussion to explore participants' views on a topic.	Generates rich data and allows for interaction.	Group dynamics and social desirability bias.
9	Content Analysis	Systematic analysis of text or media content.	Objective and replicable.	Lacks context and depth.
10	Discourse Analysis	Analysis of language use in communication.	Reveals underlying meanings and power relations.	Complex and subjective.
11	Ethnography	Immersion in a culture to understand its practices and beliefs.	Provides a deep understanding of a culture.	Time-consuming and ethically challenging.
12	Grounded Theory	Development of theory from data through iterative analysis.	Allows for the discovery of new theories.	Complex and time-consuming.
13	Phenomenology	Exploration of the lived experience of a phenomenon.	Provides a deep understanding of human experience.	Subjective and difficult to generalize.
14	Historical Research	Investigation of past events and their significance.	Provides context and insight into current issues.	Lacks control and generalizability.
15	Comparative Research	Comparison of different cultures, societies, or groups.	Identifies similarities and differences.	Complex and time-consuming.
